>>> 50 AngularJS Question

AngularJS Basics:

1. What is AngularJS, and what are its key features?
2. Explain the key differences between AngularJS and Angular (2+).
3. Describe the architecture of an AngularJS application.
4. How do two-way data binding and dependency injection work in AngularJS?
5. What is the AngularJS module, and how is it used in an application?

Directives and Templates:

6. What are directives in AngularJS, and how do they enhance HTML?
7. How do you create custom directives in AngularJS?
8. Explain the purpose of ng-model, ng-repeat, and ng-bind directives.
9. How can you use templates to display dynamic content in AngularJS?
10. What is the role of filters in AngularJS, and how are they used?

Controllers and Scope:

11. What is an AngularJS controller, and how do you define one?
12. Describe the concept of $scope and its role in connecting controllers and views.
13. How do you handle user events in an AngularJS controller?
14. What is the difference between a controller and a service in AngularJS?
15. Explain how to communicate between controllers in AngularJS.

Services and Dependency Injection:

16. What is a service in AngularJS, and why are they important?
17. How do you create a custom service in AngularJS?
18. Describe the purpose of dependency injection and how it's implemented in AngularJS.
19. What is the difference between factory, service, and provider in AngularJS?
20. How can you inject services into controllers and other components?

Routing and Navigation:

21. What is the AngularJS router, and how is it configured?
22. How do you set up routes and views for different sections of an AngularJS application?
23. Explain how to handle route parameters and query parameters.
24. How do you protect routes and create authenticated routes in AngularJS?
25. What is the purpose of the "resolve" property in route configuration?

Forms and Validation:

26. How do you create and handle forms in AngularJS?
27. Explain the use of ng-model for two-way data binding in forms.

28. What is form validation, and how can it be implemented in AngularJS?
29. Describe the built-in validation directives in AngularJS, such as ng-required and ng-pattern.
30. How do you implement custom validation in AngularJS?

Services for HTTP and Data:

31. What is the $http service, and how is it used to make HTTP requests in AngularJS?
32. Explain the concept of promises and how they relate to $http requests.
33. How do you use the $resource service to interact with RESTful APIs in AngularJS?
34. Describe how to implement CRUD operations using $http or $resource.
35. What is the AngularJS interceptor, and how can it be used for global request/response handling?

AngularJS Directives:

36. What are some commonly used built-in directives in AngularJS?
37. How do you create custom directives, and what are the steps involved?
38. Explain the lifecycle of a directive, including the link and compile phases.
39. What is transclusion in AngularJS, and how can it be used in custom directives?
40. How do you isolate scope in a custom directive to prevent scope pollution?

Testing in AngularJS:

41. What is unit testing in the context of AngularJS?
42. Describe the purpose of the Jasmine testing framework for AngularJS.
43. How do you set up Karma as a test runner for AngularJS applications?
44. Explain the role of AngularJS mocks and spies in testing.
45. How can you test controllers, services, and directives in AngularJS?

AngularJS Best Practices:

46. What are some best practices for organizing an AngularJS application's code and structure?
47. How can you optimize AngularJS performance and minimize digest cycle iterations?
48. Explain the concept of lazy loading and how it can be applied in AngularJS.
49. What are some common security considerations when working with AngularJS applications?
50. Describe the process of migrating an AngularJS application to a newer version of Angular.
